DATE MAILED: 02/21/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/343,509	Applicant(s) TAKABATAKE ET AL.	
	Examiner Derrick W. Ferris	Art Unit 2663	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 January 2006.
 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) ☐ Claim(s) _____ is/are allowed.
 6) ☒ Claim(s) 1-24 is/are rejected.
 7) ☐ Claim(s) _____ is/are objected to.
 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
 10) ☒ The drawing(s) filed on 6/30/1999 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☒ All b) ☐ Some * c) ☐ None of:
 1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/13/2006 has been entered.

Response to Amendment

2. **Claims 1-24** as amended are still in consideration for this application. Applicant has amended claims **1, 8, 16, 19 and 22**.

3. Examiner does **not withdraw** the obviousness rejection to *Chambers* (formally *Srivastava*) for Office action filed 7/14/2005. First, applicant is correct in noting that the applied reference is U.S. Patent No. 5,959,536 to *Chambers et al.* ("*Chambers*") which was previously addressed as U.S. Patent No. 5,959,536 to *Chambers et al.* ("*Srivastava*"). Second, the examiner thanks applicant for attempting to clarify the issue by further amending the claims. However, the current amendment does not appear to overcome applicant's argument. In particular, applicant argues that *Chambers* does not teach the further limitation while said communication node is *actually operating on the first network* (see page 16 of applicant's remarks). The examiner respectfully disagrees. At issue is the term "operating". The examiner notes the above term is still met by the *Chambers*' reference even though the abstract portion of the byte code is run on a class D device, see e.g., column 7, lines 8-55 in view of column 5, lines 23-52. In particular, the above limitation is met since at least the abstract device 202 has the

Art Unit: 2663

responsibility of translating command messages it receives into actions on the *real device 108* it represents, see column 7, lines 17-20. As such, the above limitation is met. Specifically, *how* the one communication node operates on the first network is not further recited in the claims. Hence the rejection is maintained. Even though the same rejection is applied, the following rejection is made non-final since applicant paid for an RCE.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 1-24** are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,959,536 to *Chambers et al.* ("*Chambers*") in view of "'In Home' Digital Networks and Cordless Options" to *Eilley*.

As to **claim 1**, see e.g., figure 1 of *Chambers* where a first interface unit is part of control means 114 connecting a class C device such as device 106 (i.e., one communication node), a second interface unit is the interface of control means 114 connecting a class B device such as device 104 (i.e., another communication node) and the processing unit is the internal structure of control means 114 shown e.g., in figure 2. In particular, the class C device 106 (i.e., said one communication node) is recognized as a part of the communication node on the second network by the class B device 104 (i.e., said another communication node) since the control means 114 runs the class C device locally via a device abstraction, see e.g., column 5, lines 23-52. As such, the class D

device or control means can communicate with the class B device such that that class D device will disclose an own configuration information regarding what its constituent elements are to another communication node on the second network (i.e., a class B device) since the communication is bi-directional. Examiner notes further interpretations where a first interface unit could be class D device 114 and a second interface unit could be class D device 116. Examiner notes an even further interpretation where a class C device could be a one communication node and another class C device could be another communication node. The class C device 114,116 is further voluntarily recognized since not all the devices support an abstract portion of the class such as Class A and B devices. The class C device further operates on the first network since at least the user interface still remains on the first network since it translates actions on the real device 108 it represents.

Chambers is silent or deficient to the further limitation where a communications node is a wireless node which has a first interface to a radio network and a second interface to a non-radio network.

Elley teaches the further recited limitation above at e.g., at page bottom of page 8/4 and in figures 1 and 2 on page 8/5.

The proposed modification of the above-applied reference(s) necessary to arrive at the claimed subject matter would be to modify *Srivastava* by clarifying that the communications node can be a wireless base station.

As such, examiner notes that it would have been obvious to one skilled in the art prior to applicant's invention to include the above limitation. In particular, the motivation

Art Unit: 2663

for modifying the reference or to combine the reference teachings would be for mobility. In particular, *Eilley* cures the above-cited deficiency by providing a motivation found at e.g., page 8/2 under the section “The Cordless Advantage”.

As to **claim 2**, the class D device supports AV CTS/P1394 thus supporting sub constituent elements. In addition, see e.g., sub-bundle at column 13, lines 25-30 of *Chambers*.

As to **claim 3**, see figure 2 of *Chambers* where the event manager 210 and registry 208 keep track of the protocols and where the Messaging System hides the difference between the protocols, e.g., see column 11, lines 4-18.

As to **claim 4**, an e.g., of reserving a network resource could be using the “named route”, see e.g., column 12, lines 5-47 of *Chambers*. Examiner also notes non-local signal routing also reserves network resources, see e.g., column 15, lines 1-13 of *Chambers*.

As to **claim 5**, the processing unit or control means/ class D device 114 provides no configuration information using the abstract device, see e.g., figure 2 of *Chambers*.

As to **claim 6**, the processing unit or control means/ class D device 114 also communicates with the class C device (e.g., class C device 106) (i.e., the higher layer protocols communicate back to the class C device).

As to **claim 7**, the processing unit or control means/ class D device 114 communicates with both device locally and thus brokers communication between the two devices on different networks.

As to **claim 8**, see similar rejection for claim 1.

Art Unit: 2663

As to **claim 9**, see similar rejection for claim 2.

As to **claim 10**, see e.g., figure 2 of *Chambers* for the further structure of the processing unit and in particular the abstract device 202, event manager 210 and registry 208.

As to **claim 11**, see the rejection for claim 3.

As to **claim 12**, see the rejection for claim 4.

As to **claim 13**, see the rejection for claim 5.

As to **claim 14**, see the rejection for claim 6.

As to **claim 15**, see the rejection for claim 7.

As to **claim 16**, see the rejection for claim 1.

As to **claim 17**, see the rejection for claim 3.

As to **claim 18**, see the rejection for claim 4.

As to **claim 19**, see similar rejection for claim 1 where *Chambers* further teaches AV CTS / P1394, see e.g., column 6, lines 15-34; column 7, lines 1-8; and column 11, lines 4-51.

As to **claims 20 and 21**, see similar rejection for claim 10.

As to **claim 22**, see the rejection for claim 19.

As to **claims 23 and 24**, see the rejection for claims 20 and 21 respectively.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derrick W. Ferris whose telephone number is (571) 272-3123.

The examiner can normally be reached on M-F 9 A.M. - 4:30 P.M. E.S.T.

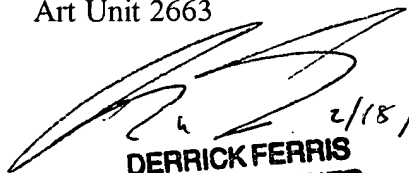

Art Unit: 2663

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wellington Chin can be reached on (571)272-3134. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
